

Day 3 – Decision making statement

1. Check if Number is Positive, Negative, or Zero
2. Find Largest of 3 Numbers
3. Simple ATM Withdrawal Logic
4. Student Grading System (Nested if)
5. Find the product of digits of a number
6. Check the number is palindrome or not
7. Leap Year Check
8. Check whether a number contains only even digits
9. Find the nearest multiple of 10 for a given number

Day 3 – Decision making statement

1. Check if number is positive, negative, zero

```
num = int(input("Enter a number: "))
```

```
if num > 0:
```

```
    print("Positive")
```

```
elif num < 0:
```

```
    print("Negative")
```

```
else:
```

```
    print("Zero")
```

2. Find Largest of 3 Numbers

```
2.1 a = int(input("Enter first number: "))
```

```
b = int(input("Enter second number: "))
```

```
c = int(input("Enter third number: "))
```

```
largest = max(a, b, c)
```

```
print("Largest number is:", largest)
```

```
2.2 a = int(input("Enter first number: "))
```

```
b = int(input("Enter second number: "))
```

```
c = int(input("Enter third number: "))
```

Day 3 – Decision making statement

```
if a >= b and a >= c:
```

```
    print("Largest number is:", a)
```

```
elif b >= a and b >= c:
```

```
    print("Largest number is:", b)
```

```
else:
```

```
    print("Largest number is:", c)
```

3.Simple ATM Withdrawal Logic

```
balance = 10000
```

```
amount = int(input("Enter withdrawal amount: "))
```

```
if amount <= balance:
```

```
    balance = balance - amount
```

```
    print("Withdrawal Successful")
```

```
    print("Remaining Balance:", balance)
```

```
else:
```

```
    print("Insufficient Balance")
```

Day 3 – Decision making statement

4. Student Grading System (Nested if)

```
mark = int(input("Enter mark: "))
```

```
if mark >= 35:
```

```
    if mark >= 90:
```

```
        print("Grade A")
```

```
    elif mark >= 75:
```

```
        print("Grade B")
```

```
    elif mark >= 60:
```

```
        print("Grade C")
```

```
    else:
```

```
        print("Grade D")
```

```
else:
```

```
    print("Fail")
```

7. Leap Year Check

```
year = int(input("Enter year: "))
```

```
if (year % 400 == 0) or (year % 4 == 0 and year % 100 != 0):
```

```
    print("Leap Year")
```

```
else: print("Not a Leap Year")
```

Day 3 – Decision making statement

8. Check whether a number contains only even digits

```
n = int(input("Enter a number: "))
temp = n
flag = True
while temp > 0:
    digit = temp % 10
    if digit % 2 != 0:
        flag = False
        break
    temp = temp // 10
if flag:
    print("Contains only even digits")
else:
    print("Contains odd digits")
```

9. Find the nearest multiple of 10 for a given number

```
n = int(input("Enter a number: "))
rem = n % 10
if rem >= 5:
    print(n + (10 - rem))
else:
    print(n - rem)
```
